

- **Case Number:** 123
- **Case Title:** Suspect Computer Examination
- **Investigator(s):**Yash Pardeshi (Junior Forensics Investigator)
- **Agency/Department:** 567
- **Date Opened:** 11-09-2025
- **Date Closed:** In process

2. Request for Examination

- **Requestor:**XYZ
- **Reason for Request:** Case number 456
- **Scope of Analysis:** Removal Drive

3. Evidence Information

- **Item Number:** 001
- **Description of Evidence:** Memory Card reader with a Memorycard
- **Condition of Evidence:** Intact
- **Collection Method:** Seized
- **Chain of Custody:** ABC XYZ (first responder) 4:00 11-09-2025

4. Tools and Methodology

- **Forensic Tools Used:** FTK
- **Imaging Process:** write-blocker, hash values for verification
- **Hash Values (MD5/SHA1/SHA256):**

MD5 checksum: 4f96054c9e4eaec085159ce9ecdf74f3 : verified

SHA1 checksum: 6aac3341aa40ec2ee747e3928aa951796585d871 :
verified

- **Analysis Methods:** Keyword search, timeline analysis, file carving, email review, etc.
-

5. Findings

- **Summary of Analysis:** Boot File of Tulip
- **Artifacts Recovered:**

- Documents/files of interest
- Deleted/recovered data
- User activity logs

- **Timestamps:**

Acquisition started: Thu Sep 11 08:48:09 2025

Acquisition finished: Thu Sep 11 09:13:54 2025

Verification started: Thu Sep 11 09:13:55 2025

Verification finished: Thu Sep 11 09:14:07 2025

- **Relevant Observations:**no anomalies found

6. Conclusion

Summary Statement:

The forensic examination of the seized memory card reader with memory card (Item #001) was conducted using industry-standard methodologies and tools (FTK). The acquisition and verification processes were successfully completed with hash values (MD5, SHA1)

confirming the integrity of the data. Analysis revealed the presence of a boot file named *Tulip*. Additional artifacts, including documents/files of interest, deleted/recovered data, and user activity logs, were recovered. No anomalies or signs of tampering were identified.

Limitations:

- Some files may have been deleted or overwritten prior to seizure, limiting recovery.
- No encrypted or corrupted data were encountered during the analysis.
- The investigation scope was limited to the contents of the memory card only.

Opinion/Interpretation:

Based on the findings, the evidence is consistent with normal use of the memory card. The presence of the *Tulip* boot file and recovered artifacts may be relevant to the ongoing investigation. No indications of data manipulation were observed.

7. Appendices

Photographs of Evidence:

Images documenting the seized memory card reader and memory card before and after acquisition.

Screenshots of Key Findings:

Screenshots from FTK illustrating the recovered *Tulip* boot file, deleted data, and user activity logs.

Detailed Logs/Exports:

- Acquisition log showing start/finish times.
- Verification log with MD5 and SHA1 hash values confirming data integrity.
- FTK-generated keyword search and file carving results.

Chain of Custody Forms:

Documentation of evidence handling, including the initial seizure by first responder ABC XYZ at 4:00 on 11-09-2025 and subsequent custody transfers.
